Professional Experience:

Retail Insights LLC | March 2022 - Present
Full Stack Software Engineer II

Lead development on and maintained multiple of the companies clients' internal and client facing platforms & tools. Some of those tools include Consumer & Rx drug pricing, promotion and deal bidding. They also include trade show registration systems, new vendor compliance setup & submission, compliance & tax form handling, product management and more. I also helped develop & maintain many internal tools and development packages that are shared between the different systems. Those packages handle workflow processes, roles & users, fields and automated form generation and more.

Laravel, PHP, Livewire, Blade, HTML, CSS/SASS, Javascript, JQuery, MySQL, AWS, Bootstrap, Vue Js, Rest APIs, Workflows, Jira, Github.

Delivery Circle | June 2020 - February 2022
Full Stack Software Engineer

Worked on an agile team to develop new features, fix bugs and make improvements to the company's core product, a last-mile logistics order management system. Developed features including Driver Payout Dashboards, Invoice Details and Delivery Compliance Reporting, User Status Filters and Profiles, Google Secret Manager integration and more.

Laravel, PHP, Blade, HTML, Bootstrap, Javascript, JQuery, MySQL, PHPUnit, Laravel Dusk

Projects:
Many more available at https://github.com/kyledoesdev

Song Ranker https://www.song-rank.com
A web application that allows a user to log in with their spotify account, search for a music artist and rank that artist's discography, a particular record or EP or tracks. It allows you to find out what your favorite songs are, in order and share your results with friends. This application has over **50** active users and **100** unique rankings created by them from all over the world.

---

Laravel, PHP, Blade, TailwindCSS, MySQL, Vue Js, Laravel Vapor, Laravel Socialite, AWS Lambda, Merge Sort Algorithm

SDP Tracker https://www.sdp-tracker.com

A Laravel application made for the Sleep Deprived Podcast. The sleep deprived podcast contains a weekly segment where the podcast members have a debate or a discussion about a particular topic. This application tracks the discussions from week-to-week and allows users to view the data from prior episodes.

Laravel, PHP, Blade, Bootstrap, MySQL, AWS

Time Tracker https://github.com/kylenotfound/TimeTracker

A Java program for the popular game "Minecraft". Time Tracker is a plugin that you can add to a Minecraft Server that tracks player activity and playtime. Simply run commands in the in-game chat to learn how long you've played in the word, or see who is the most active!

Java, Yaml, Spigot, Github.

Django Music App https://github.com/kylenotfound/DjangoMusicApp

A small Django project for a university course that utilizes Django social authentication to allow a user to log in with their Spotify account. They are able to get music recommendations and learn what their most played songs are by interacting with the Spotify API.

Django, Python, HTM, Bootstrap

Technical Skills:

PHP, Java, Python, HTML, CSS, SASS, Bootstrap, TailwindCSS, Javascript, JQuery, Vue Js, Alpine Js, NodeJs, NPM, Vite, Laravel, Django, Livewire, Laravel Blade, SQL, MySQL, PHPUnit, PestPHP, Composer, Git, Github, AWS, Jira, Trello, Several Linux Distributions, Bitbucket, Postman, VS Code, Unit Testing, TDD, MVC, REST, Workflows, Database Migrations, Pair Programming, Team Programming, Technical Writing
